

## Individual Assignment #2

### 1. Overall Vision:

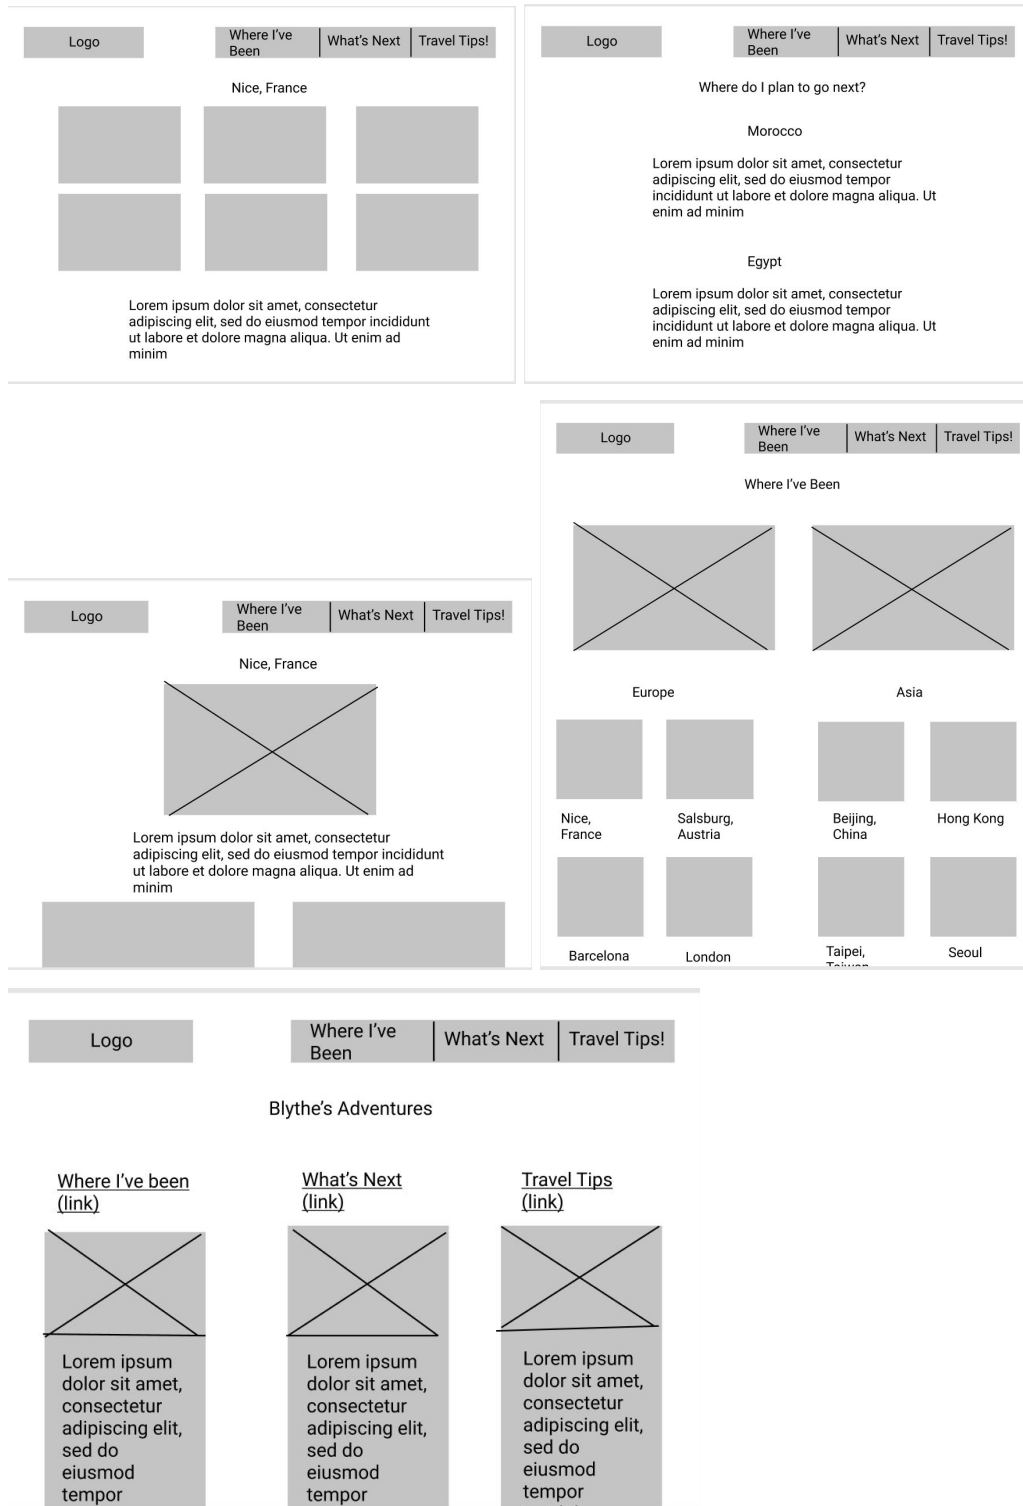

The theme I decided to choose for my website is travelling. I have always been an avid traveler and it my goal in life is to visit all of the countries in the world as well as all of the states in the US. I have already had the opportunity to visit so many great places but never took the time to document my individual experiences in each place. I have lost a lot of the photos I have taken and memories I have made. Especially with COVID restrictions, I am scared that I forget the fun that I have while exploring new places and lose the desire when the world goes back to normal. I hope that by creating this site, I am able to go back and see all of the amazing memories I have had and motivate myself to document many more to come.

The full wire frames can be found on the figma link. I used some of the elements found on popular travel blogs. However, a lot of these blogs were not organized in the way I would have liked and had a lot of ads on the side which was overwhelming for me. Furthermore, a lot of the popular travel youtubers I watched did not have their own websites and instead relied on

Instagram and other social media platforms, making it more challenging to find inspiration. I combined some elements that I liked on the sites that I found with my own design. I decided to make my website more minimalistic since I wanted the user to focus more on the site content and images. I used a light blue background and dark blue text because those colors are more calming and that is what I personally associate with travelling and vacations. I also made sure to include a lot of white space as well to keep the content more spread out to not overwhelm the user. Lastly, I decided to use fonts in the sans-serif font family because they tend to give off a casual and friendly feeling for the user which is what I wanted my site to be about.
